

TechTales Landing Page - Vercel Deployment Instructions

Current Status

Repository cloned: `https://github.com/lfaletti/techtales-landing/`
Vercel CLI installed and configured
Next.js project detected in `/app` directory
Deployment script created and ready

Option 1: Quick Deployment with Token (Recommended)

Step 1: Get Your Vercel Token

1. Complete the GitHub login in the browser (currently open)
2. Go to: `https://vercel.com/account/tokens`
3. Click "Create Token"
4. Give it a name (e.g., "TechTales Deployment")
5. Copy the generated token

Step 2: Deploy with Token

```
cd /home/ubuntu/techtales-landing
./deploy_to_vercel.sh YOUR_VERCEL_TOKEN_HERE
```

Option 2: Browser Authentication

Step 1: Complete GitHub Login

1. Sign in to GitHub in the browser (currently open)
2. Authorize Vercel to access your GitHub account
3. You'll get a verification code

Step 2: Complete CLI Authentication

```
cd /home/ubuntu/techtales-landing/app
export PATH=$PATH:/home/ubuntu/.npm-global/bin
vercel login
# Enter the verification code when prompted
```

Step 3: Deploy

```
cd /home/ubuntu/techtales-landing
./deploy_to_vercel.sh
```

What the Deployment Script Does

1. **Verifies Prerequisites:** Checks that Vercel CLI is installed
2. **Links Project:** Connects your local project to Vercel
3. **Builds & Deploys:** Automatically builds and deploys to production
4. **Extracts URL:** Captures the deployment URL from the output
5. **Provides Summary:** Shows deployment information and logs

Expected Output

After successful deployment, you'll see:

```
Deployment successful!  
Your site is live at: https://your-project-name.vercel.app
```

Project Details

- **Framework:** Next.js 14.2.28
- **Source:** `/home/ubuntu/techtales-landing/app`
- **Build Output:** Automatically handled by Vercel
- **Domain:** Will be auto-generated (e.g., `techtales-landing-xyz.vercel.app`)

Troubleshooting

If deployment fails:

1. Check logs in `/tmp/vercel_deployment.log`
2. Ensure you're authenticated: `vercel whoami`
3. Verify project structure: `ls -la /home/ubuntu/techtales-landing/app`

Next Steps After Deployment

1. **Custom Domain:** Add your own domain in Vercel dashboard
2. **Environment Variables:** Configure any needed env vars
3. **Analytics:** Enable Vercel Analytics if desired
4. **Monitoring:** Set up deployment notifications

Ready to deploy? Choose Option 1 for fastest results!
